A T

Always turn cache on

(ON CACHE)!

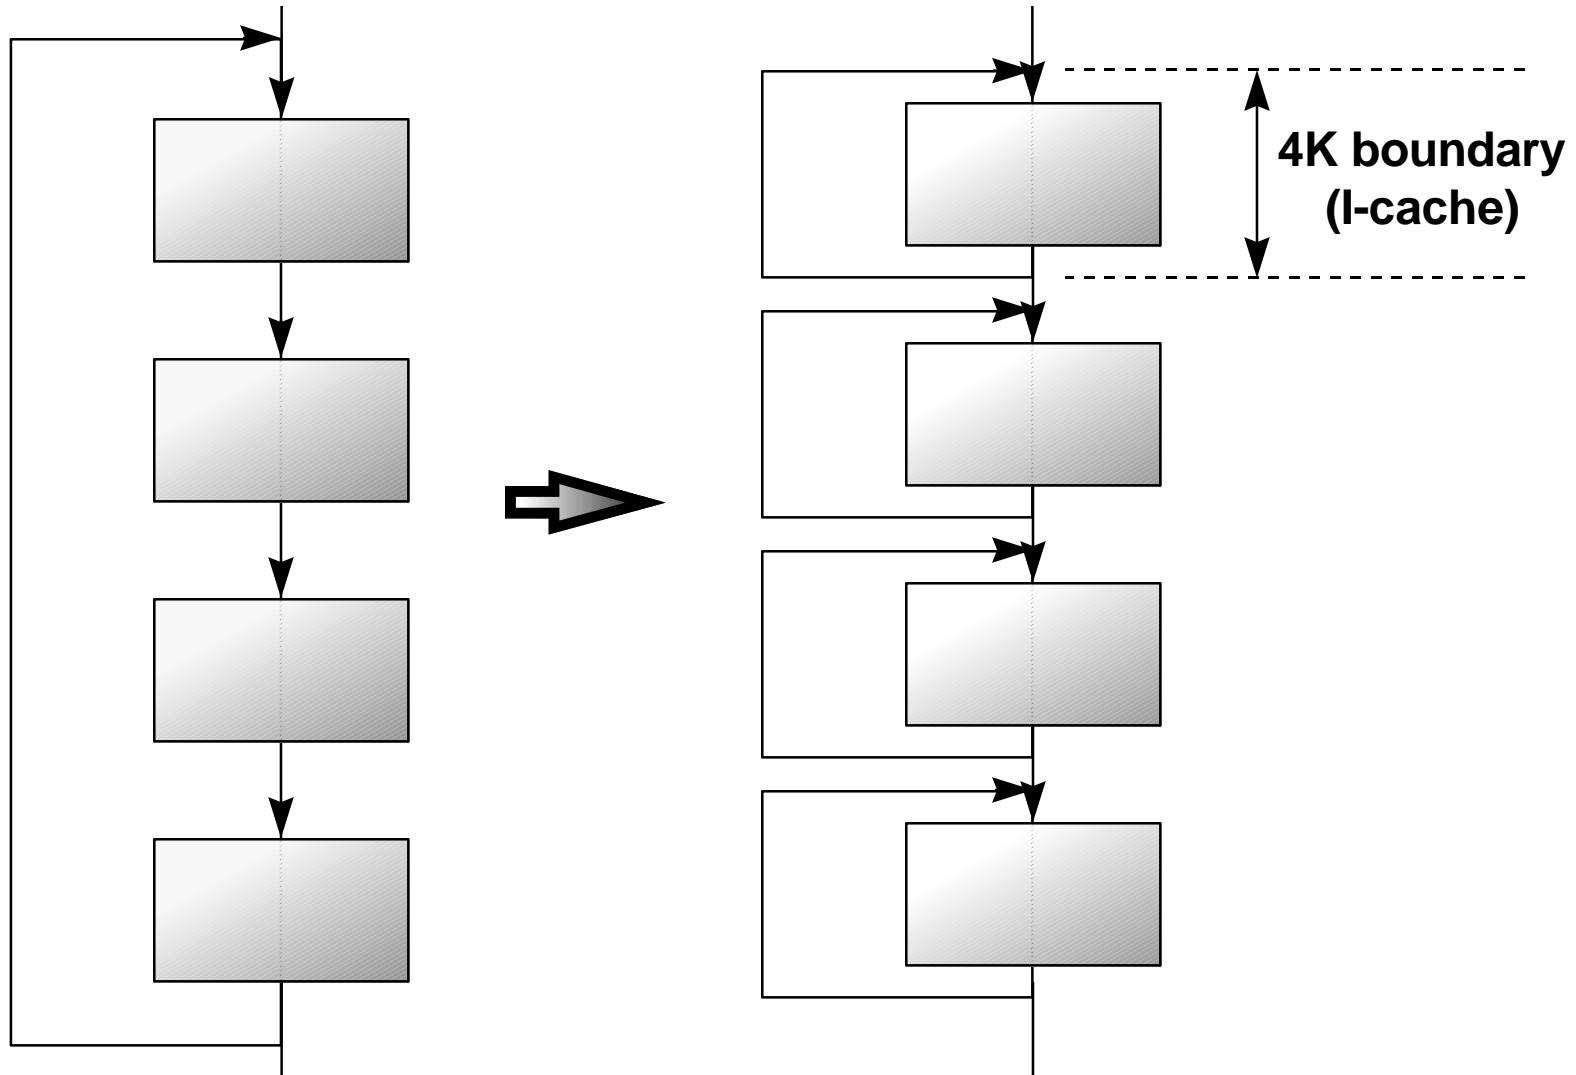

Write programs so that commands and
data can take advantage of I-cache and
Scratch Pad

Sony Computer Entertainment Inc.

CONFIDENTI

Using short loops

Sony Computer Entertainment Inc.

CONFIDENTI

OFF CACHE using library (1)

```
func(){  
    for(i = 0; i < n; i++){  
        .....  
        RotTransPers(V0, sxy, p, flag);  
        .....  
    }  
}
```

libgte:

```
RotTransPers(V0, sxy, p, flag);
```

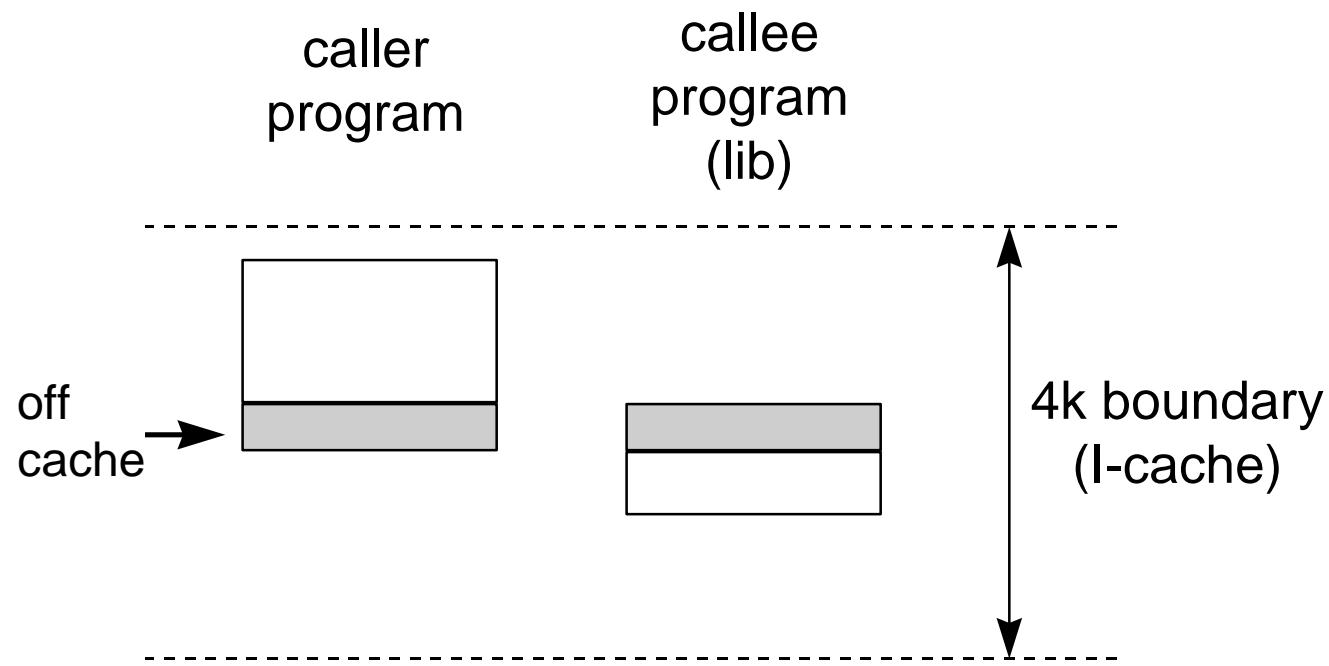

Sony Computer Entertainment Inc.

CONFIDENTI

OFF CACHE using library (2)

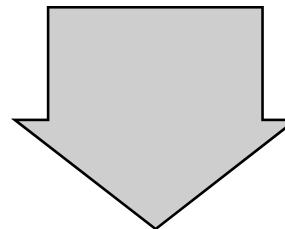

The PlayStation I-cache uses direct mapping so in cases such as the one shown below, small programs are OFF CACHE as well

What is DMPSX?

DMPSX

- a utility used when compiling a program
- directly inlines code where a function is called

This makes it possible to actively control how the program will operate in the I-cache.

Sony Computer Entertainment Inc.

CONFIDENTI

DMPSX Configuration

GTEMAC.H: **libgte** described on DMPSX Basic Function

```
#define gte_RotTransPers(r1, r2, r3, r4, r5){\  
    gte_ldv0(r1);           \  
    gte_rtps():\  
    gte_stsxy(r2):\  
    gte_stdp(r3):\  
    gte_stflg(r4):\  
    gte_stszotz(r5):\  
}
```

INLINE.H: Basic Function dummy cord

```
#define gte_rtps(){\  
    __asm__ volatile(“.word 0x00000a3f”:::$12”,“$13”,“$14”,“$15”,“memory”);\  
    __asm__ volatile(“.word 0x00000a3e”:::$12”,“$13”,“$14”,“$15”,“memory”);\  
    __asm__ volatile(“.word 0x00000a3e”:::$12”,“$13”,“$14”,“$15”,“memory”);\  
}
```

DMPSX.EXE: Utility for converting a dummy cord to a real cord
(DMPSX mainframe)

Sony Computer Entertainment Inc.

CONFIDENTI

Improving speed using DMPSX (inline compiler) (1)

```
func(){  
    for(i = 0; i < n; i++){  
        .....  
        RotTransPers(V0, sxy, p, flag);  
        .....  
    }  
}
```

```
func(){  
    for(i = 0; i < n; i++){  
        .....  
        gte_RotTransPers(V0, sxy, p, flag, otz);  
        .....  
    }  
}
```

Always ON CACHE

Sony Computer Entertainment Inc.

CONFIDENTI
AL

Improving speed using DMPSX (inline compiler) (2)

```
*otz = RotTransPers(v0, sxy, p, flag);
```

```
gte_RotTransPers(v0, sxy, p, flag, otz);
```

Valid when the command is OFF CACHE

Sony Computer Entertainment Inc.

CONFIDENTI

Improving speed using DMPSX (inline compiler) (3)

Contents of Inline Functions

```
gte_RotTransPers(v0, sxy, p, flag, otz);
```

||

```
{  
    gte_ldv0(v0); /* type1: load 3D coordinate */  
    gte_rtps();   /* type2: Rotate, Transfer, Perspect */  
    gte_stsxy(sxy); /* type3: store 2D coordinate */  
    gte_stdp(p); /* type3: store depth que p */  
    gte_stflg(flag);/* type3: store flag */  
    gte_stszotz(otz); /* type3: store sz/4 as otz */  
}
```

: see gtemac.h type1: "Register Load Functions"
 type2: "GTE Commands"
 type3: "Register Store Functions"

Sony Computer Entertainment Inc.

CONFIDENTI

Improving speed using DMPSX (inline compiler) (4)

Program using Basic Functions

```
{  
    gte_ldv0(v0);      /* type1: load 3D coordinate */  
    gte_rtps();        /* type2: Rotate, Transfer, Perspect */  
    gte_stsxy(sxy);   /* type3: store 2D coordinate */  
    gte_stdp(p);       /* type3: store depth que p */  
    gte_stflg(flag);  /* type3: store flag */  
    gte_stszotz(otz); /* type3: store sz/4 as otz */  
}
```

Elimination of unnecessary commands

```
{  
    gte_ldv0(v0);      /* type1: load 3D coordinate */  
    gte_rtps();        /* type2: Rotate, Transfer, Perspect */  
    gte_stsxy(sxy);   /* type3: store 2D coordinate */  
    gte_stdp(p);       /* type3: store depth que p */  
    gte_stflg(flag);  /* type3: store flag */  
    gte_stszotz(otz); /* type3: store sz/4 as otz */  
}
```

Sony Computer Entertainment Inc.

CONFIDENTI

Improving speed using DMPSX (inline compiler) (5)

Program using Basic Functions

```
{  
    gte_ldv0(v0);  
    gte_rtps();  
    gte_stsxy(sxy);  
    gte_stdp(p);  
    gte_ctflg(flag);  
    gte_stszotz(otz);  
}
```

CPU process is inserted between GTE command
(type2) and store command (type3)

In this operation, GTE and CPU
are operating in parallel

```
{  
    gte_ldv0(v0);  
    gte_rtps();  
    gte_stsxy(sxy);  
CPU process;  
    gte_stszotz(otz);  
}
```

Sony Computer Entertainment Inc.

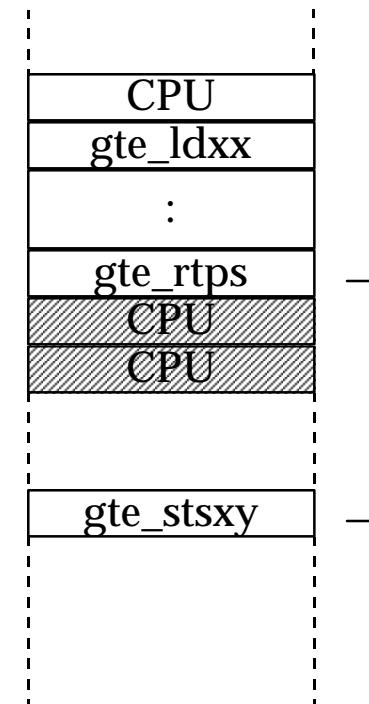

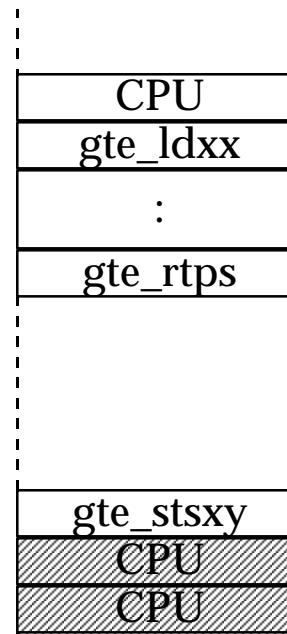

CONFIDENTI

Improving speed using process reorder

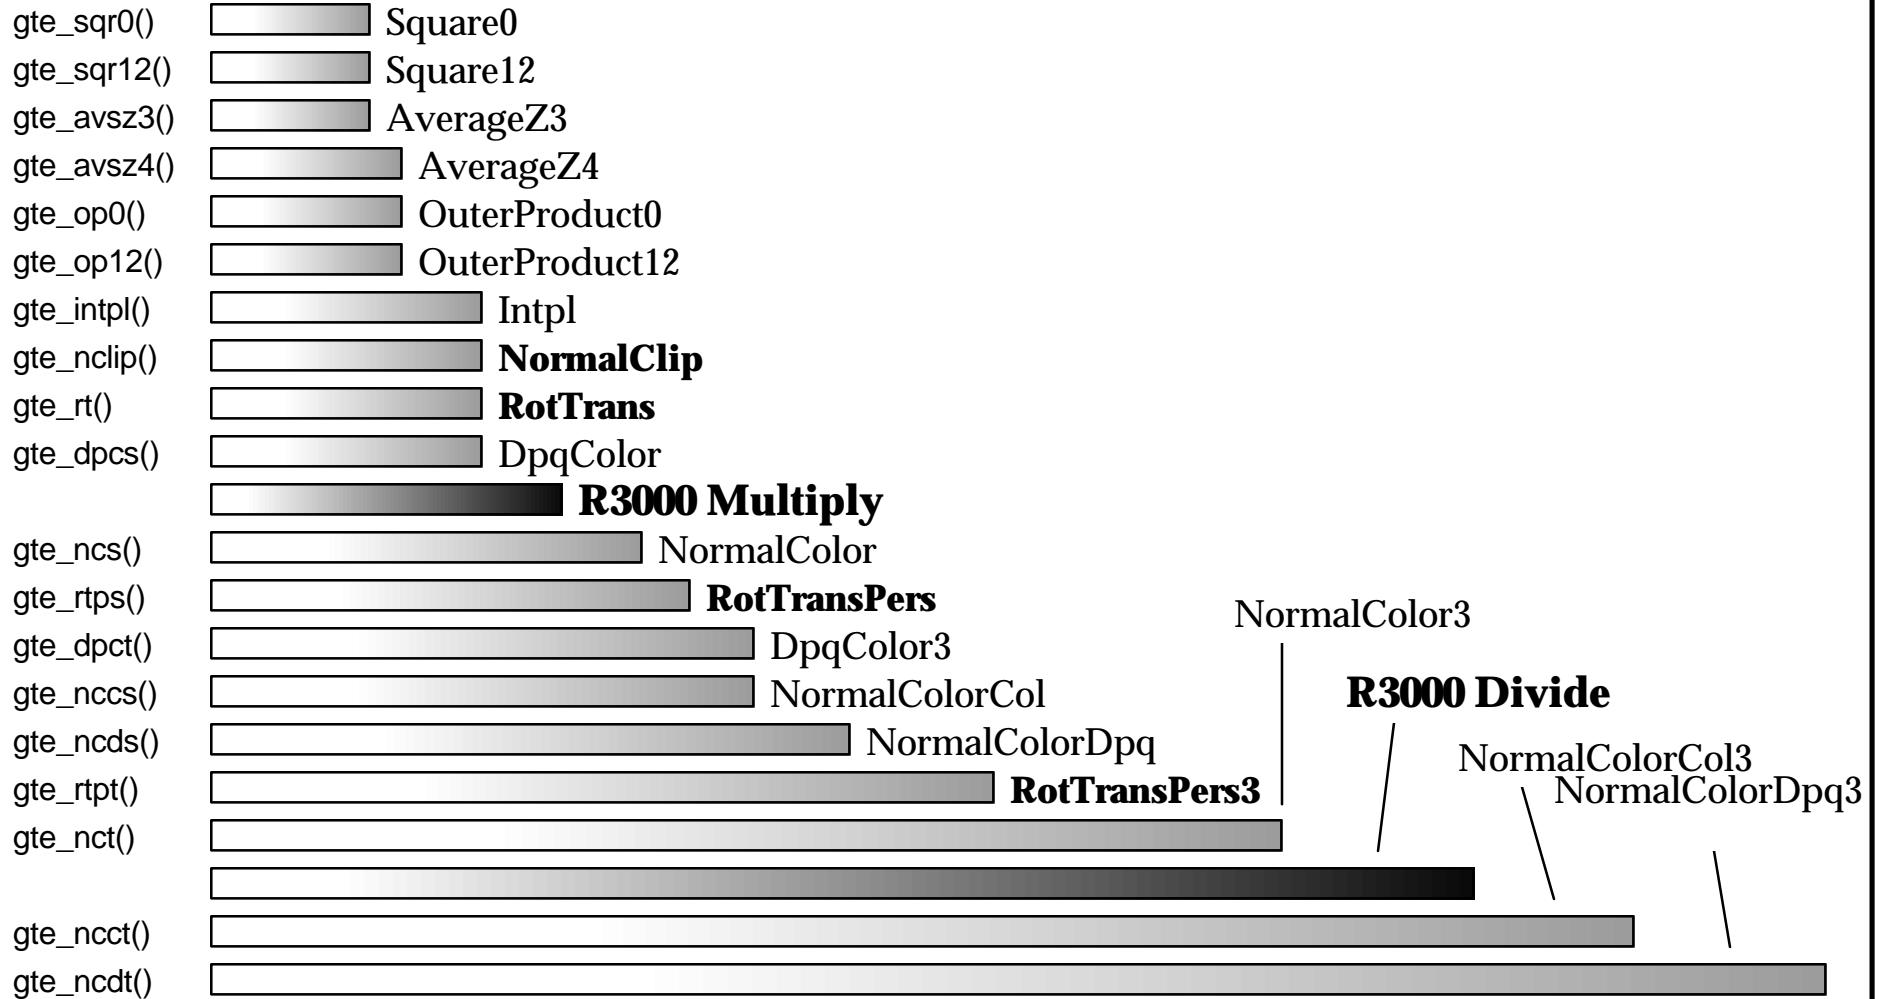

```
{  
    gte_ldv0(v0);  
    gte_rtps();  
    gte_stsxy(sxy);  
CPU process;  
}
```

```
{  
    gte_ldv0(v0);  
    gte_rtps();  
CPU process;  
    gte_stsxy(sxy);  
}
```

Calculation speed using GTE

Sony Computer Entertainment Inc.

CONFIDENTI

Sample program

```
add_cube(u_long *ot, POLY_G3 *s, SVECTOR **vp, SVECTOR **np, CVECTOR *c)
{
    int i;
    long otz, flg, clip;
    for(i = 0; i < 12; i ++, s ++, vp += 3, np += 3){
        clip = RotAverageNclipColorCol3(
            vp[0], vp[1], vp[2], np[0], np[1], np[2],
            &c[i],
            (long *)&s->x0, (long *)&s->x1, (long *)&s->x2,
            (CVECTOR)&s->r0, (CVECTOR)&s->r1, (CVECTOR)&s->r2,
            &otz, &flg);
        if(clip <= 0) continue;
        if((flg & 0x80000000) == 0){
            otz >>= (14-OTLENGTH);
            addPrim(ot+OTSIZE-otz, s);
        }
    }
}
```

Sony Computer Entertainment Inc.

CONFIDENTI

Improving speed using scratch pad (1)

```
add_cube(u_long *ot, POLY_G3 *s, SVECTOR *vp, SVECTOR **np, CVECTOR *c)
{
    int i;
    struct wk {
        u_long *ot;
        long otz, flg, clip;                                /* Local Work Area */
        CVECTOR *col;
    } *wk;
    wk = (struct wk *)getScratchAddr(0);                  /* set scratch pad address */
    wk->col = c;
    wk->ot = ot;
    for(i = 0; i < 12; i ++, s ++, vp += 3, np += 3){
        wk->clip = RotAverageNclipColorCol3(
            vp[0], vp[1], vp[2], np[0], np[1], np[2],
            &wk->col[i],
            (long *)&s->x0, (long *)&s->x1, (long *)&s->x2,
            (CVECTOR)&s->r0, (CVECTOR)&s->r1, (CVECTOR)&s->r2,
            &otz, &flg);
        if(wk->clip <= 0) continue;
        if((wk->flg & 0x80000000) == 0){
            wk->otz >= (14-OTLENGTH);
            addPrim(wk->ot+OTSIZE-wk->otz, s);
        }
    }
}
```

```

Sony Computer Entertainment Inc.

CONFIDENTI

Scratch pad stack (1)

Scratch Pad is allocated to stack

- A maximum of 1KByte is allocated to stack

Sony Computer Entertainment Inc.

CONFIDENTI

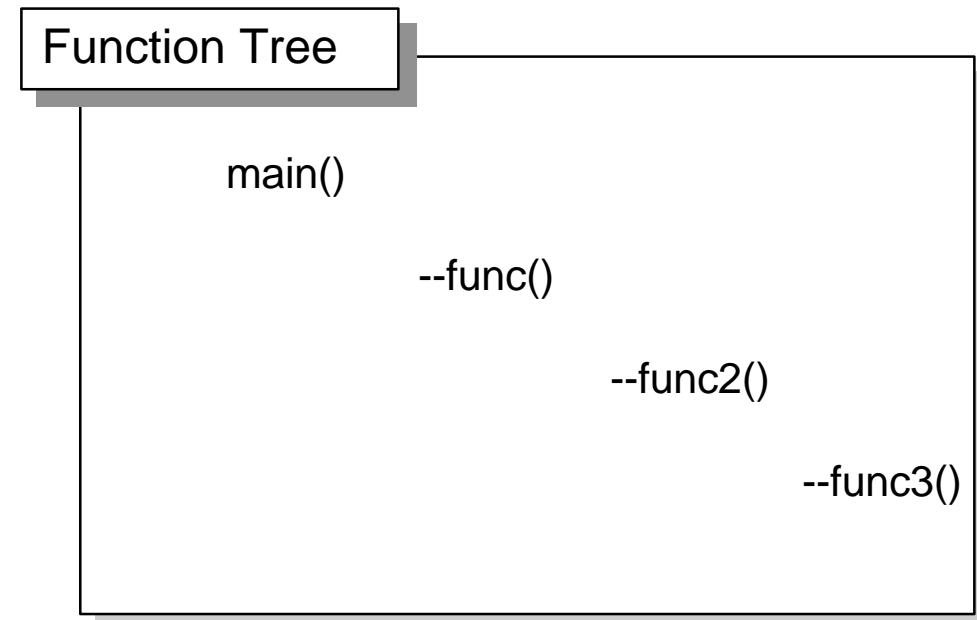

Scratch pad stack (2)

```
main()
{
    func1();
}

func1()
{
    func2();
}

func2()
{
    int i;

    for(i = 0; i < n; i++) func3(i);
}
```

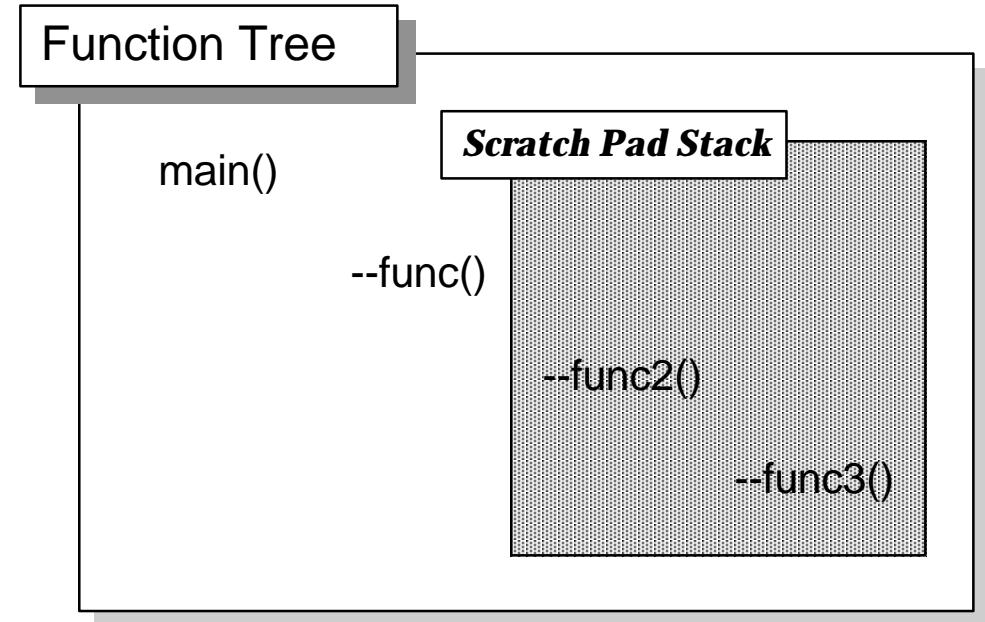

Scratch pad stack (3)

```
main()
{
    func1();
}

func1()
{
    SetSpadStack(0x1f8003fc);
    func2();
    ResetSpadStack();
}

func2()
{
    int i;

    for(i = 0; i < n; i++) func3(i);
}
```

Improving speed summary

** POINT **

Decrease the use of Main RAM since it is 5-6 times slower than Scratch Pad

1. Do not place local variables on the stack
2. Do not place arguments on the stack
3. Use Scratch Pad and DMPSX
4. Scratch Pad is allocated to stack

Reduction of stack amount used

Sony Computer Entertainment Inc.

CONFIDENTI

Recursive-call programs

Advantages

- A relatively complex operation can be written as short code

This facilitates use of the I-cache, and makes it easy to write programs that do automatic division of polygons

Disadvantages

- Uses a large amount of stack space and is slow

Sony Computer Entertainment Inc.

CONFIDENTI

Increasing speed in recursive-call programs

- Decrease stack use
 1. Make a distinction between variables (arguments) that do not need to be placed on the stack and those that do
 2. The variables and arguments that do not need to be placed on the stack should be placed as structures in the **Scratch Pad**
 3. The necessary variables and arguments should be arranged in the **Scratch Pad** according to the level of recursion

Sony Computer Entertainment Inc.

CONFIDENTI

An example of a recursive-call program

A simple triangle division : tridiv

tridiv(ot, s, v0, v1, v2, c0, c1, c2, n)

if($n == 0$){

If at the lowest level, render triangle A

}

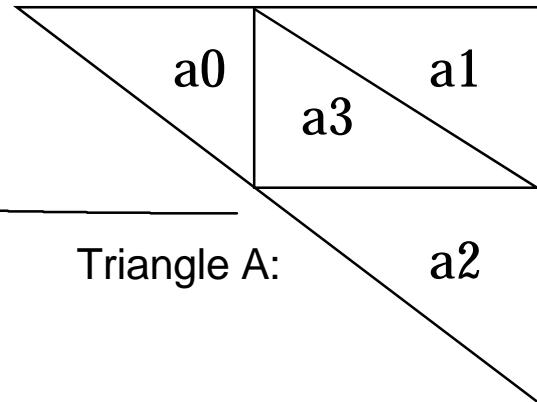

else{

For each side, calculate the center point and the color of the center point

tridiv(ot, s, a0, n-1);
tridiv(ot, s, a1, n-1);
tridiv(ot, s, a2, n-1);
tridiv(ot, s, a3, n-1);

recursive call

}

Sony Computer Entertainment Inc.

CONFIDENTI

Customizing libgs

Able to customize routines such as coordinate conversion, light source calculation, packet production, etc.

- Jump table version GsSortObject
- Customizing insignificant functions using DMPSX

Sony Computer Entertainment Inc.

CONFIDENTI

GsSortObject4J

1. GsSortObject4 → GsSortObject4J
2. Set only the necessary insignificant functions in_GsFCALL
(Memory Saving)
3. Describe the processes you would like to customize as
insignificant functions on DMPSX
4. Register on _GsFCALL

Sony Computer Entertainment Inc.

CONFIDENTI

Default operation of insignificant functions

(see. \psx\sample\graphics\tmdview\tmdview4\lowlevel)

- 1.** Coordinate conversion and perspective change of vertex data
- 2.** Flag decision
- 3.** Back Face Clip
- 4.** Light source calculations from normal data and brightness value
- 5.** Registration to OT
- 6.** Apply 1-5 for similar types of polygons

Sony Computer Entertainment Inc.

CONFIDENTI

Cautions during assembly

- Handling of delay slots
 - Insertion of dangerous commands into delay slot
 - Careless deletion of nop

***Be careful with programs that appear
to work correctly on the surface***

Sony Computer Entertainment Inc.

CONFIDENTI

Example of dangerous cases 1 (dangerous command inserted into delay slot)

```
add v0, v0, t0  
lw  t0, 0(a0)  
nop  
add v1, v1, t0
```

OK

```
.....  
lw  t0, 0(a0)  
add v0, v0, t0  
add v1, v1, t0
```

NG!

*Malfunction during
normal interrupt*

Sony Computer Entertainment Inc.

CONFIDENTI

Example of dangerous cases 2 (careless deletion of nop)

```
:  
    beq v0, zero, L1  
    nop  
    lw  t0, 0(a0)  
:  
:  
L1: add v0, v0, t0  
    lw  t0, 4(a0)  
:
```

OK

```
:  
    beq v0, zero, L1  
    lw  t0, 0(a0)  
:  
:  
L1: add v0, v0, t0  
    lw  t0, 4(a0)  
:
```

NG!

*Malfunction during
normal interrupt*

Sony Computer Entertainment Inc.

CONFIDENTI

Improving speed on GPU

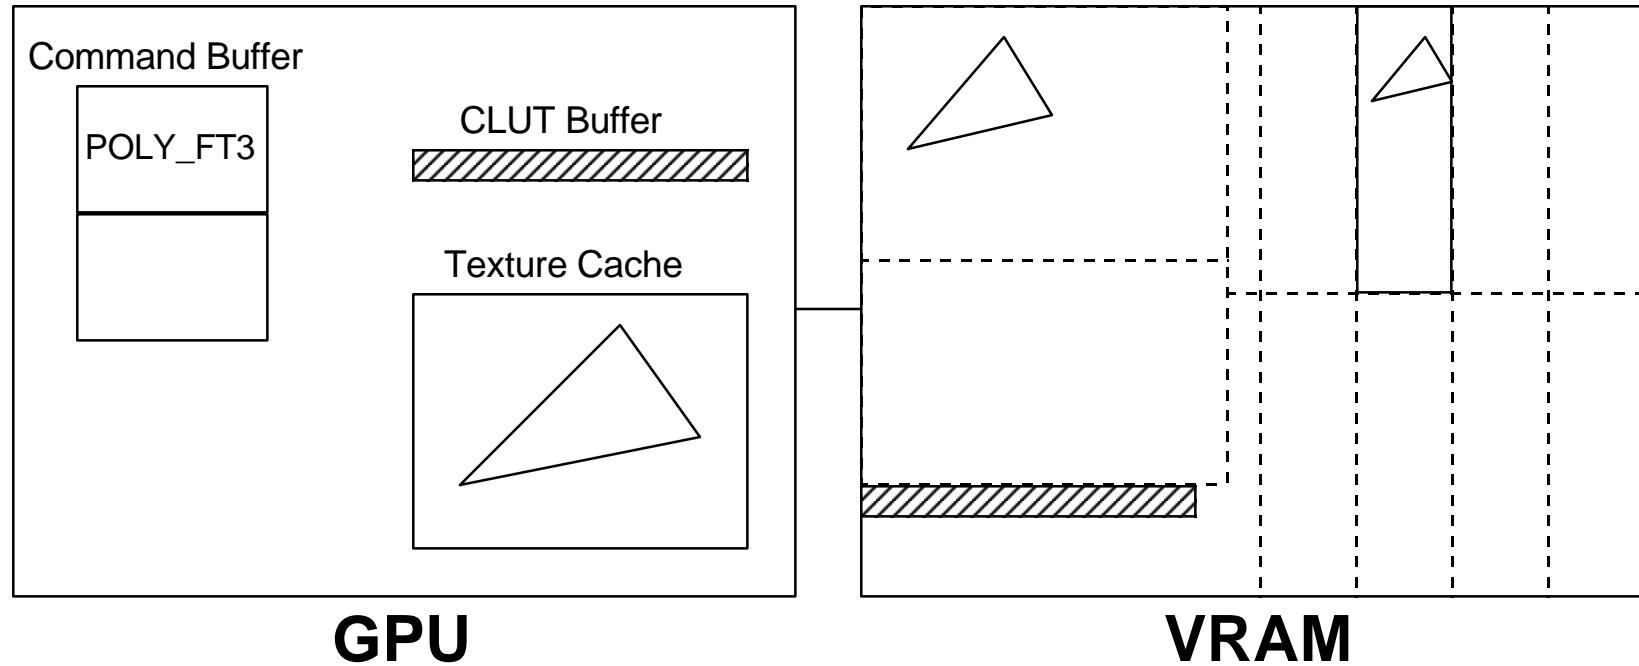

- Reduction of idle time
- Effective utilization of Texture Cache

Sony Computer Entertainment Inc.

CONFIDENTI

GPU Operation

- **16word Command Buffer**
- **2word x 256 Entry Texture Cache**
- **128word CLUT Buffer**

Sony Computer Entertainment Inc.

CONFIDENTI

Reduction of idle time

With Command Buffer is 1 Primitive at a time

NULL Primitive time is idle

**Reduction of NULL Primitive = Reduction of idle time
(Clearing time of + OT is lowered)**

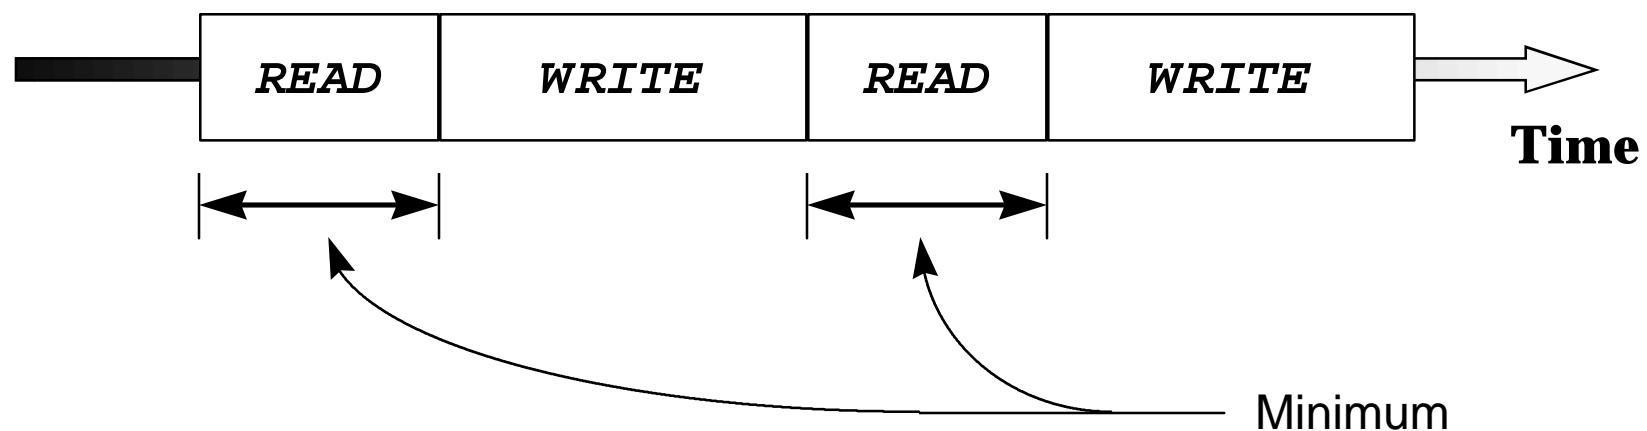

Sony Computer Entertainment Inc.

CONFIDENTI

Effective utilization of Texture Cache

Texture Mapping

→ Minimize Texture Lead Cycle

Sony Computer Entertainment Inc.

CONFIDENTI
AL

Texture Cache

Mode	Total Size	1 Entry Size	Total Entry Number
4bit	64 x 64	16 x 1	256
8bit	64 x 32	8 x 1	256
16bit	32 x 32	4 x 1	256

255					

Cache Block

Sony Computer Entertainment Inc.

CONFIDENTI
AL

Texture Lead Cycle

Occurs in cache miss hit cases

- Lowering of miss hit rate
- Decrease Lead Cycle

Sony Computer Entertainment Inc.

CONFIDENTI

Reducing miss hit rate

- Make texture size less than cache size
- Use 4bit texture - maximum size of one entry
- Do not use reduction texture - Increase amount of available data in one entry

Sony Computer Entertainment Inc.

CONFIDENTI

Reducing Lead Cycle

- Place the length texture horizontally
 - Lead is Y direction access time overhead
- Do not use reduction texture
 - Useless lead cycle occurs

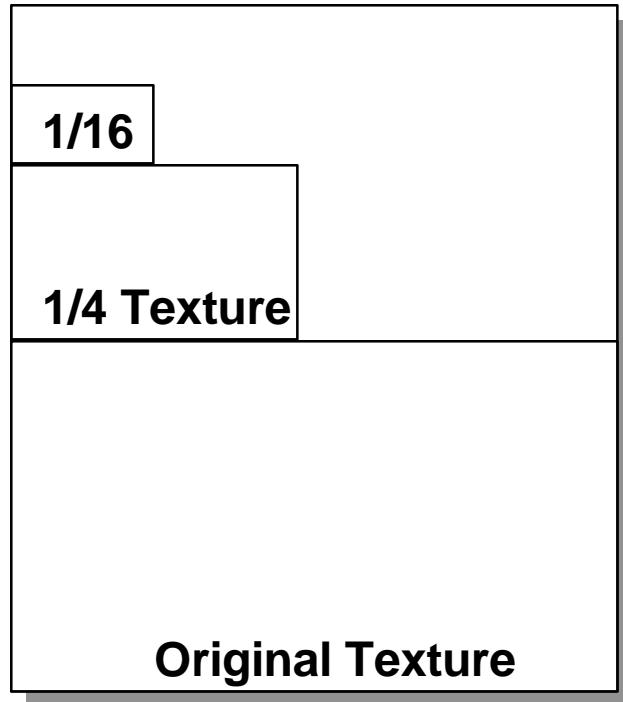

Sony Computer Entertainment Inc.

CONFIDENTI

Avoiding the use of reduction texture

Mip Mapping

In response to the polygon size the texture which was prepared beforehand should be properly used

Sony Computer Entertainment Inc.

CONFIDENTI

Methods for speeding up polygon division

Sony Computer Entertainment Inc.

CONFIDENTI

Displaying ground

1. Determine method

2. Implementation

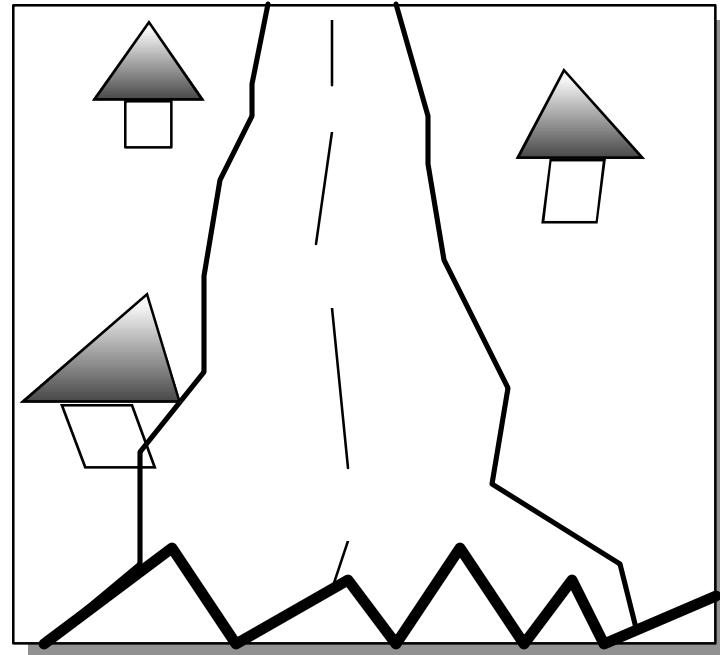

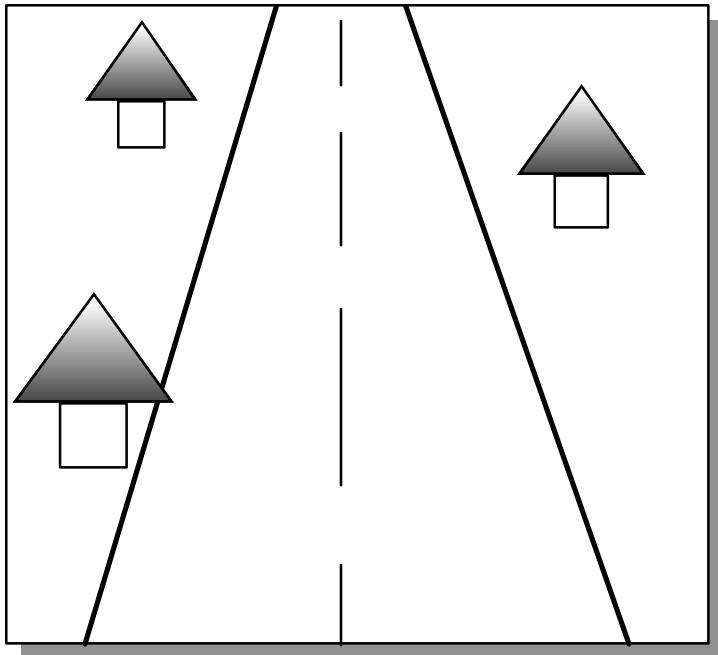

3. Improving speed

Sony Computer Entertainment Inc.

CONFIDENTI

Problems involved in displaying ground

1. Warping of texture

2. Near clipping problems

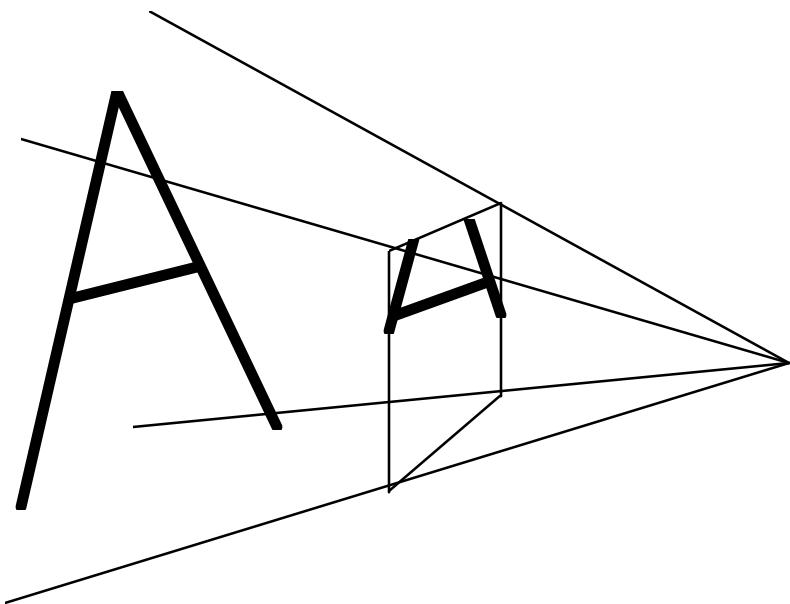

Sony Computer Entertainment Inc.

CONFIDENTI

Solution using cone clipping

O allows more polygons
to be used

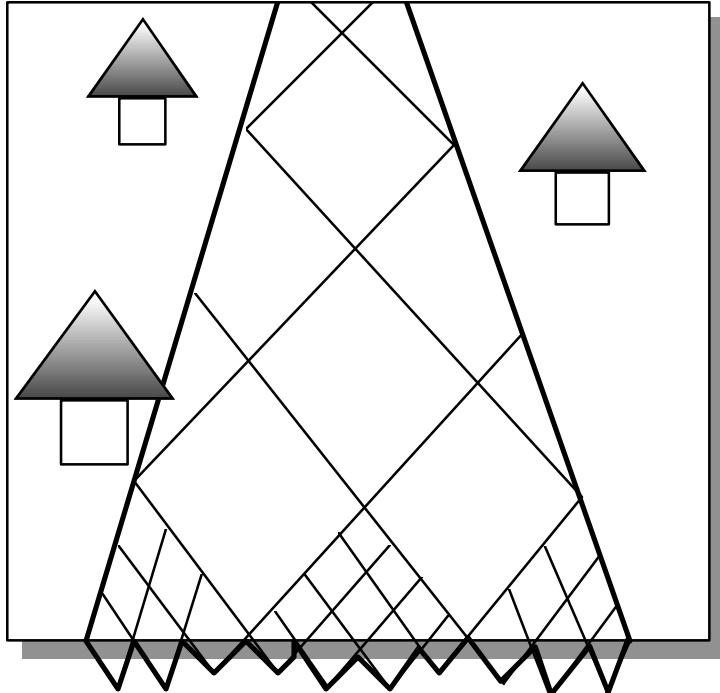

X texture jumping
X texture warping
X calculations become
more complex

Sony Computer Entertainment Inc.

CONFIDENTI

Solution using division

- O less texture jumping
- O texture warping is eliminated
- X the polygon count is increased

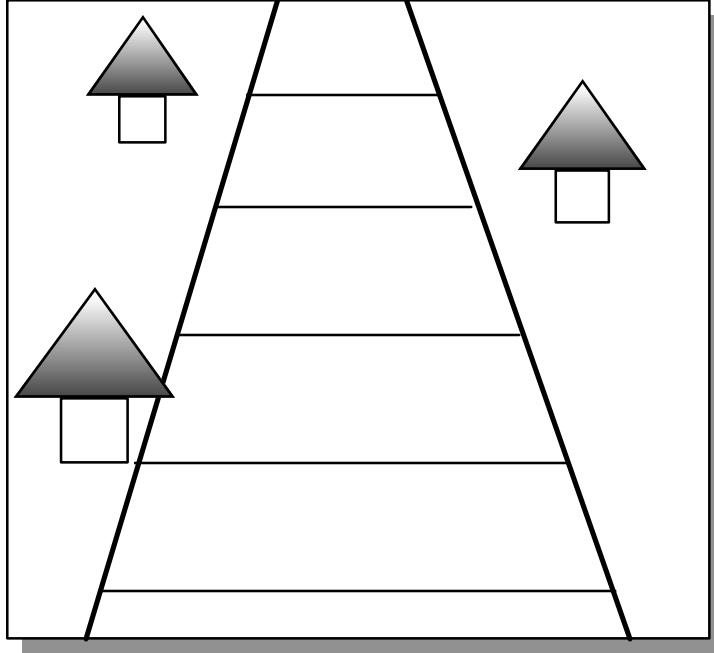

Using the division method is better!

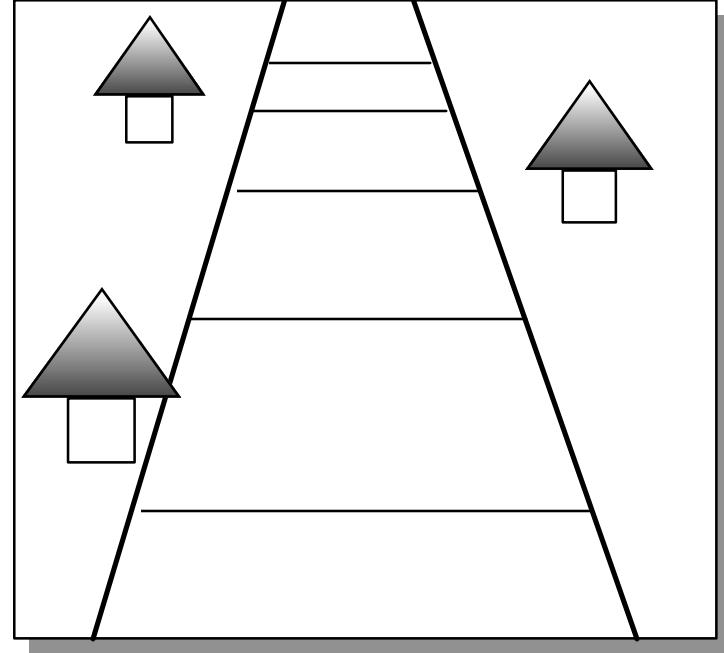

Sony Computer Entertainment Inc.

CONFIDENTI

Divide in 2 dimensions or 3 dimensions?

2 dimensions

3 dimensions

- 3 dimensions provides more accuracy
- Because GTE calculations are performed at high speeds, there is no overhead with 3-dimensional division

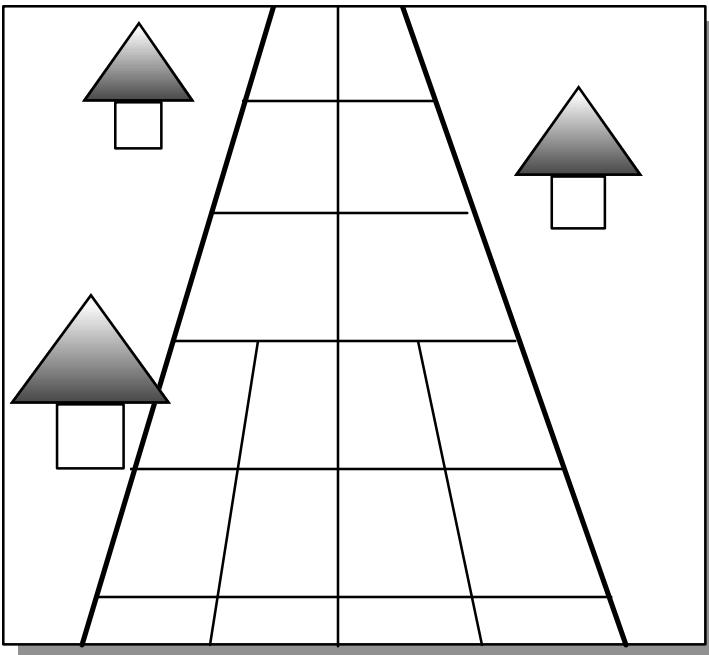

Divide in three dimensions

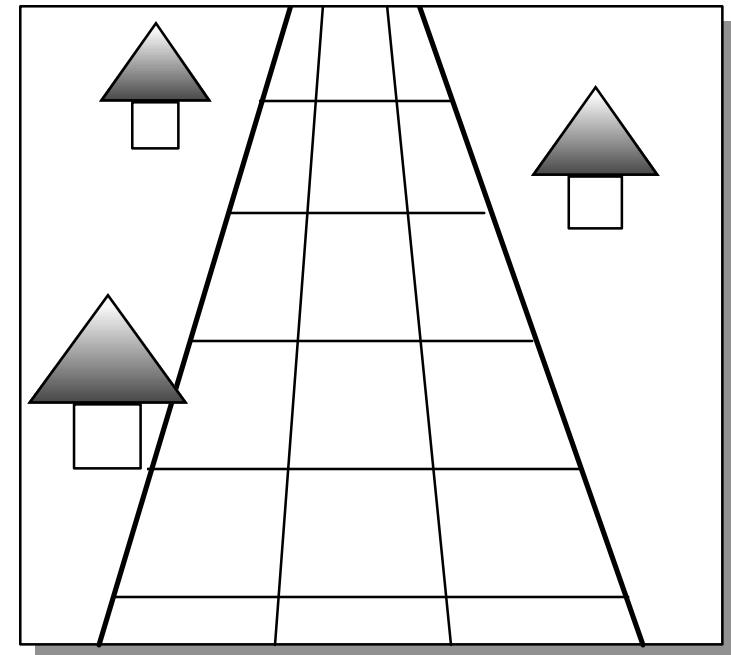

Sony Computer Entertainment Inc.

CONFIDENTI

Active division or fixed division?

Active

Fixed

Use active method

Advantages

1. Polygon count is decreased
2. Improves speed

Disadvantages

1. Gaps are generated
2. Textures become non-continuous

Sony Computer Entertainment Inc.

CONFIDENTI

Actual programming

Principle

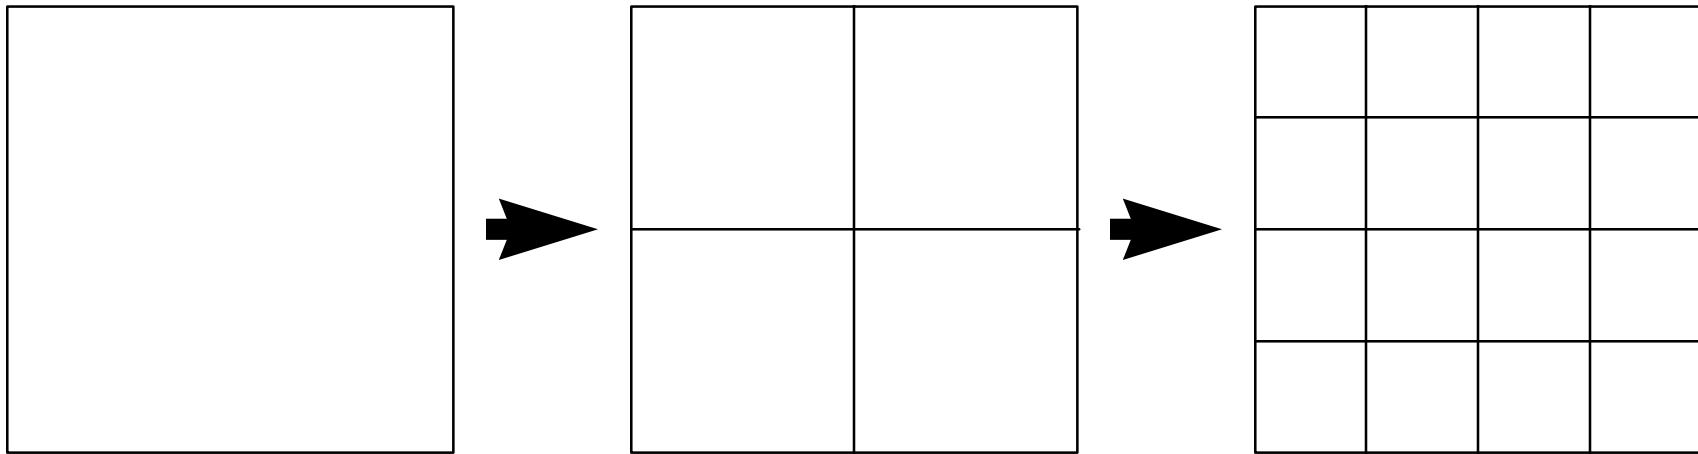

Display ground using active,
3-dimensional division

Sony Computer Entertainment Inc.

CONFIDENTI

Recursive call

2^n division

Sony Computer Entertainment Inc.

CONFIDENTI

Conditions for stopping

<Polygon vertex distance>

Reasons

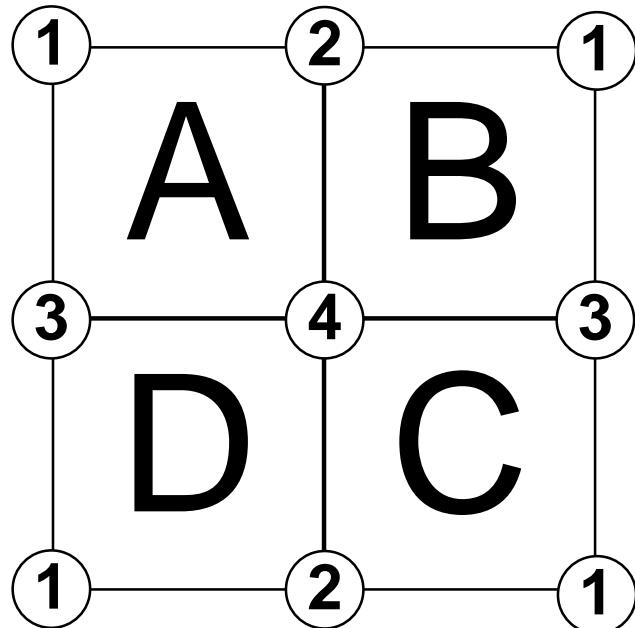

- GPU rendering limit 1024x512
- Polygon warping is most noticeable with larger polygons
- Used together with Area Clipping

Sony Computer Entertainment Inc.

CONFIDENTI

3-Dimensional 2^n division

ordered as follows: A->B->C->D

x, y, z	coordinates
r, g, b	color
u, v	texture

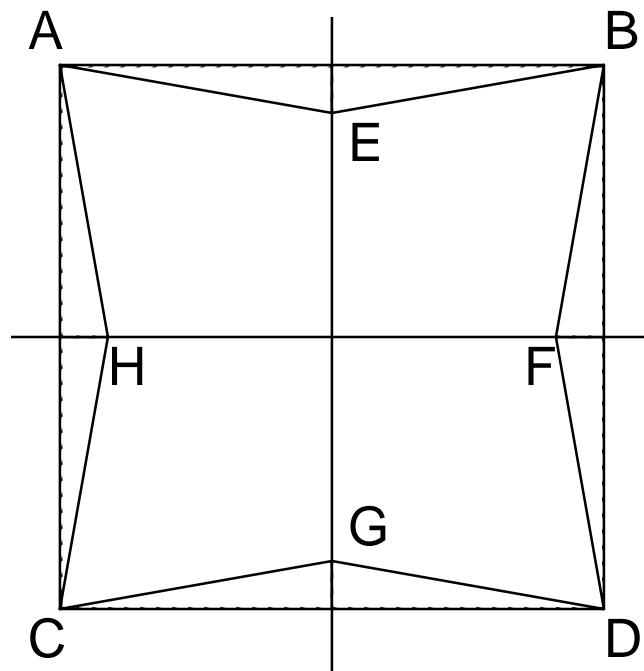

These are all divided by two

Sony Computer Entertainment Inc.

CONFIDENTI

Fixing gaps

Reason

Due to the margin of error, the center point does not necessary lie on the axis

Solution

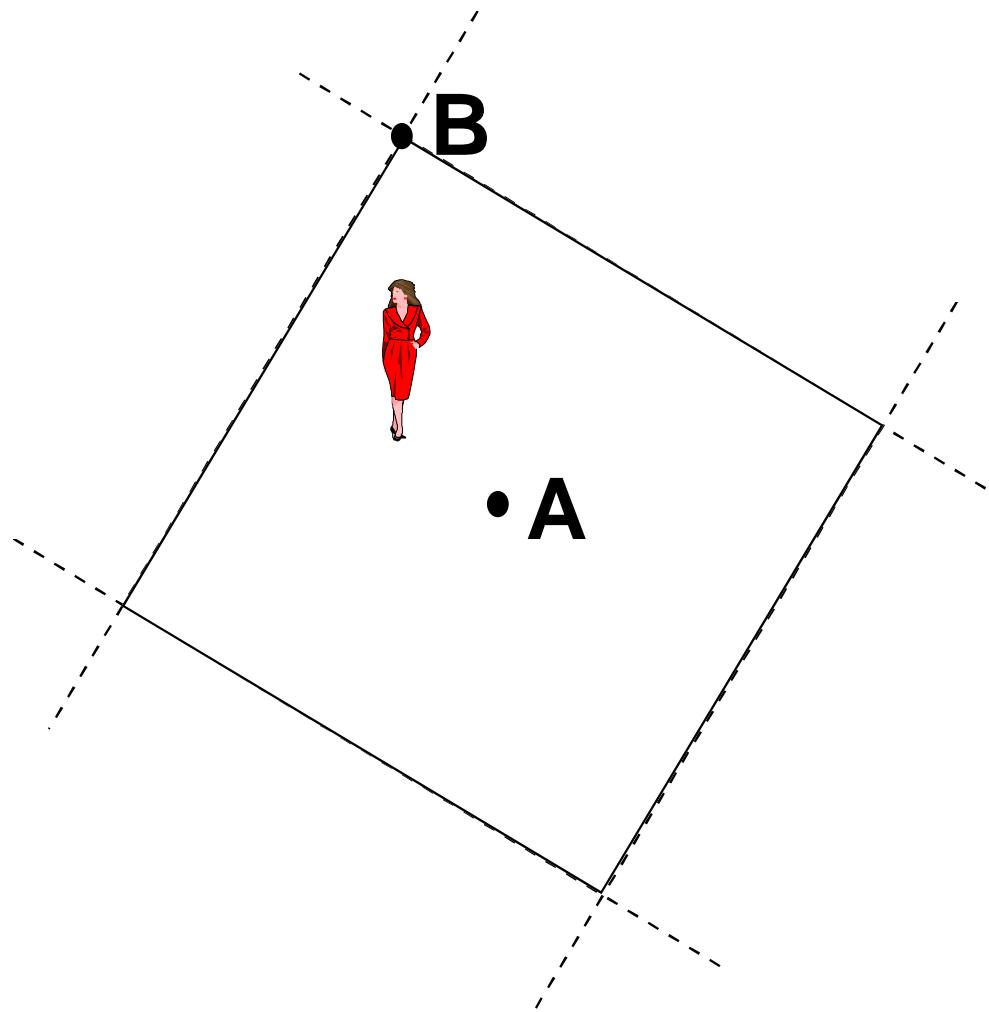

Draw a triangle for the gap as well
However, Back Clip is necessary

Sony Computer Entertainment Inc.

CONFIDENTI

Solving the Z-sort problem

Set the Z-sort point to the furthest point (B) rather than the center of gravity (A)

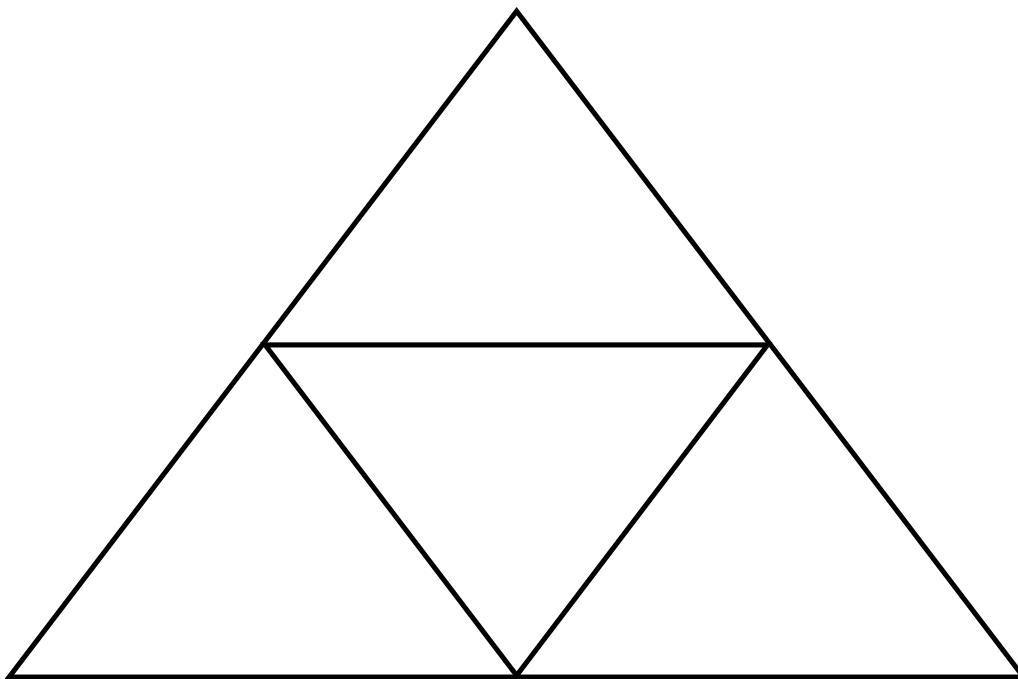

Sony Computer Entertainment Inc.

CONFIDENTI

Division of three-sided polygon

Sony Computer Entertainment Inc.

CONFIDENTI

Improving speed

**Always turn cache on
(ON CACHE)!**

**(for calculations of
the polygon unit)**

Sony Computer Entertainment Inc.

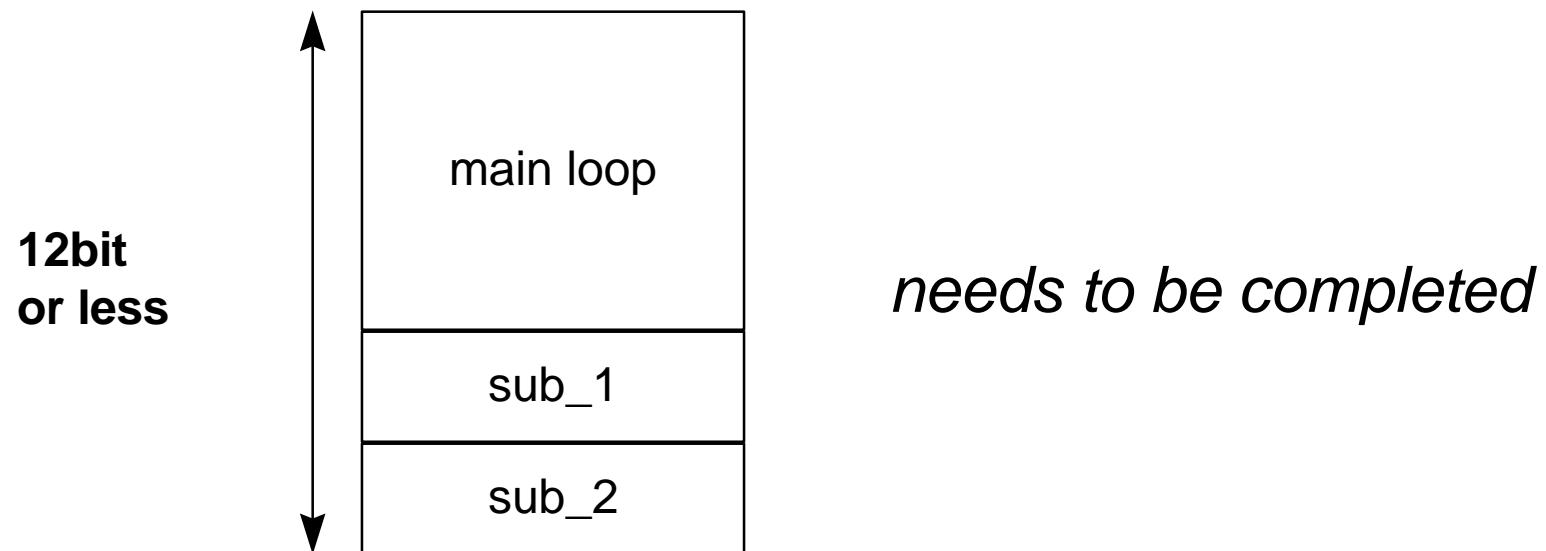

CONFIDENTI

Instruction cache (1)

c:\> dumpsym main.sym | sort

Lower 12 bits or less

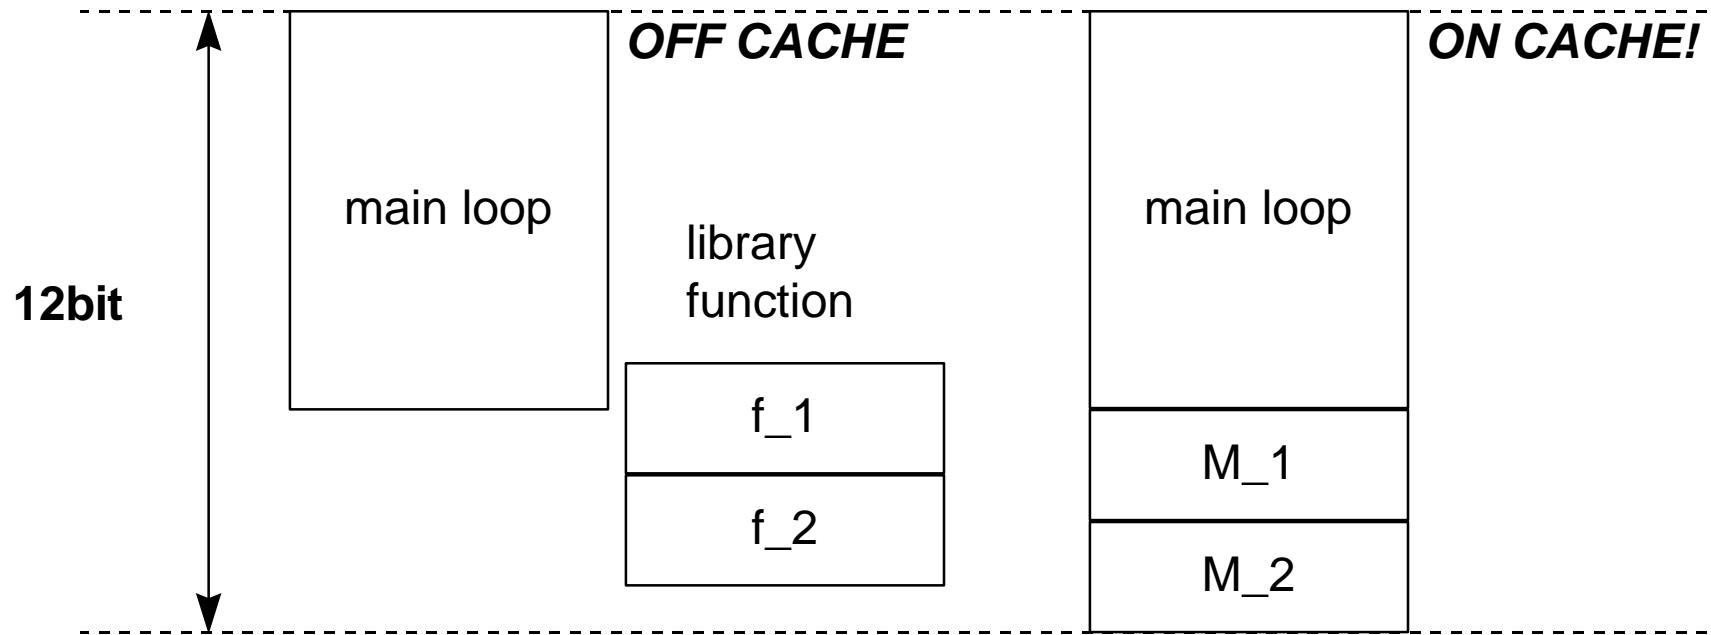

Sony Computer Entertainment Inc.

CONFIDENTI

Instruction cache (2)

Cannot call library functions
Use library macros (**dmpsx**)

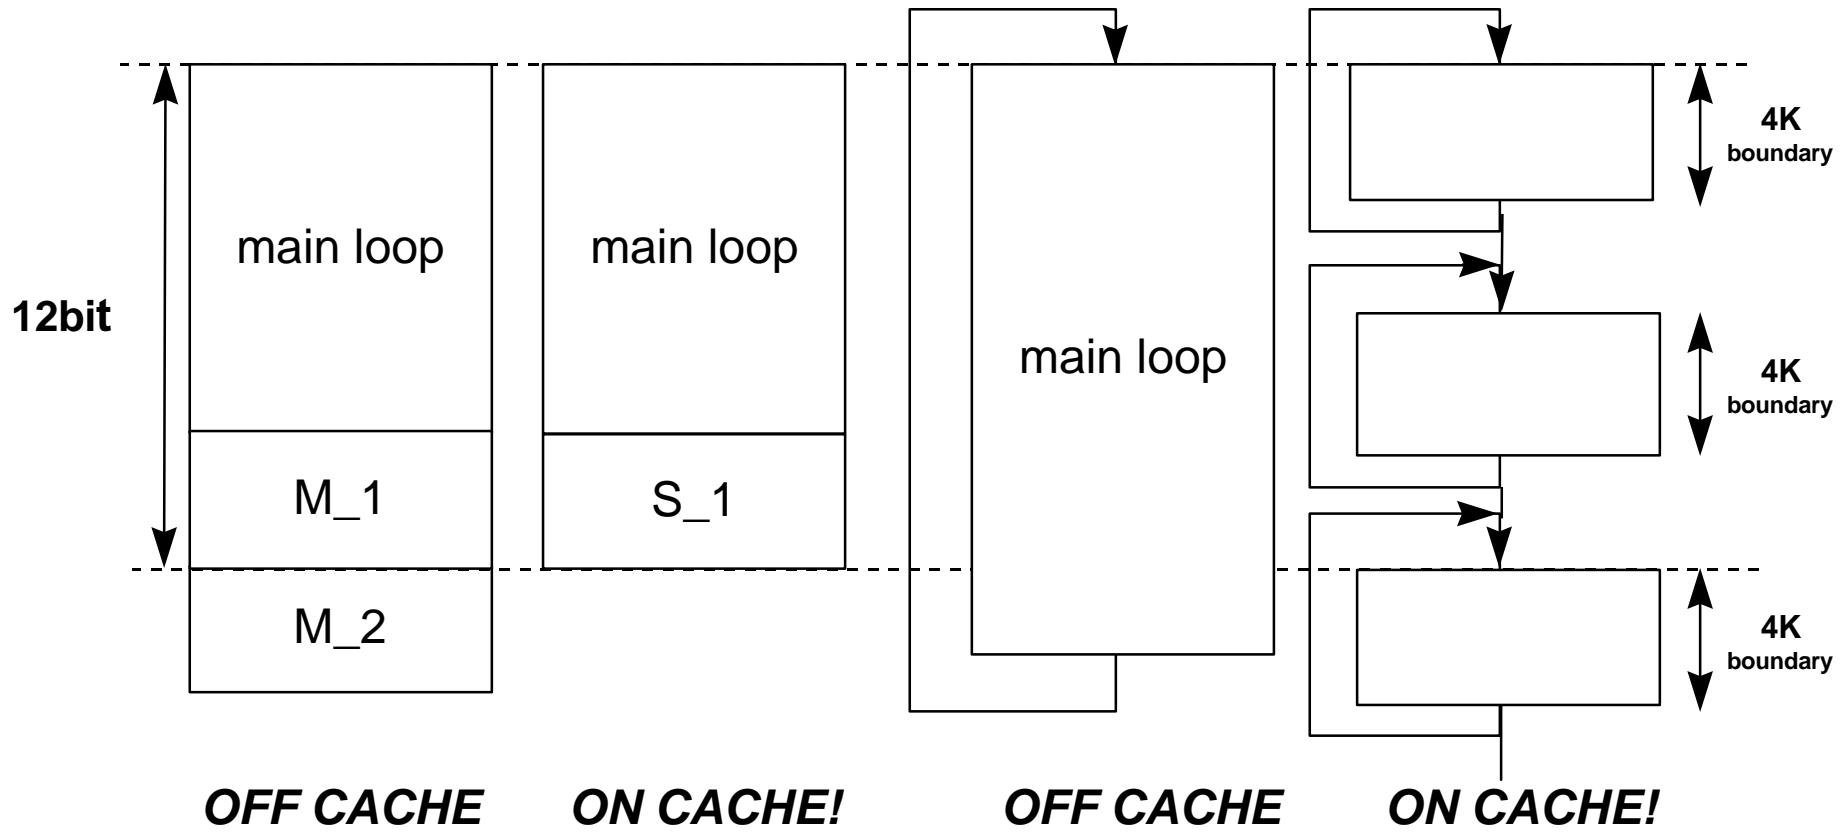

Sony Computer Entertainment Inc.

CONFIDENTI

Instruction cache (3)

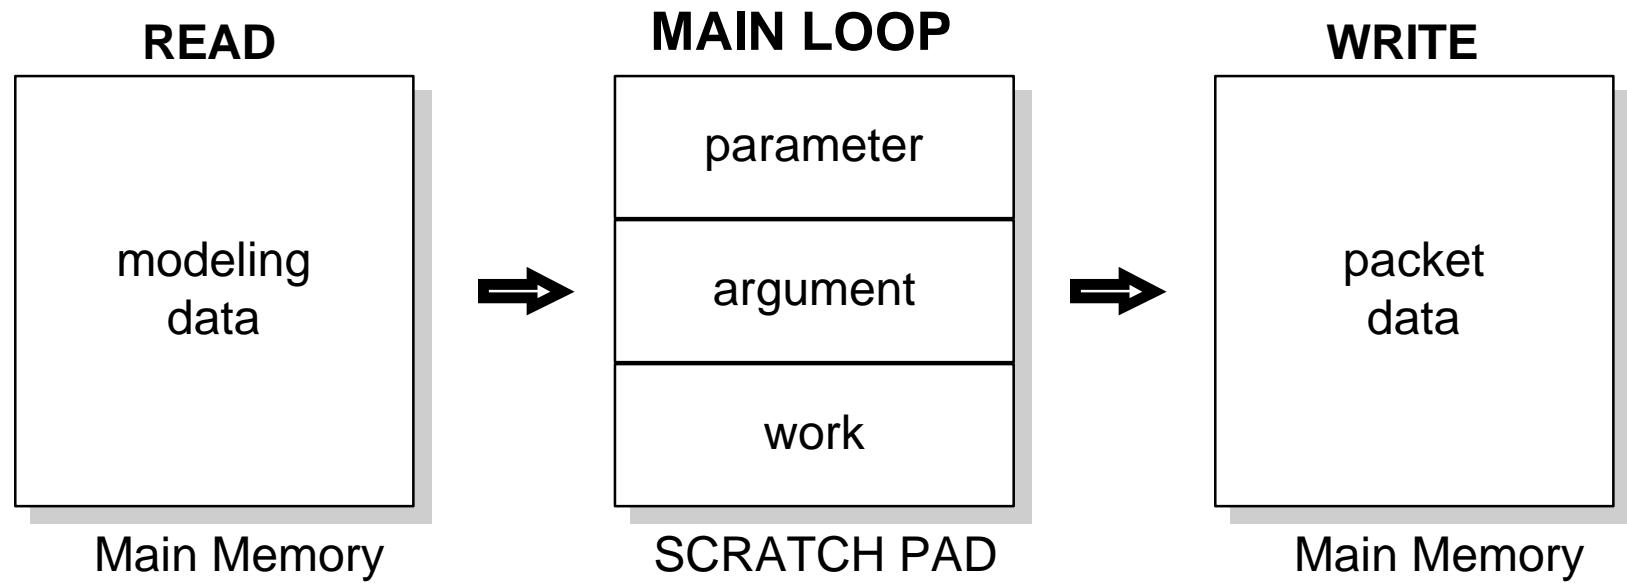

Use subroutines, keep code short

Sony Computer Entertainment Inc.

CONFIDENTI
AL

Data cache (scratch pad) (1)

Data other than modeling data and packet data should be kept in the scratch pad as much as possible

Data cache (scratch pad) (2)

PARAMETER

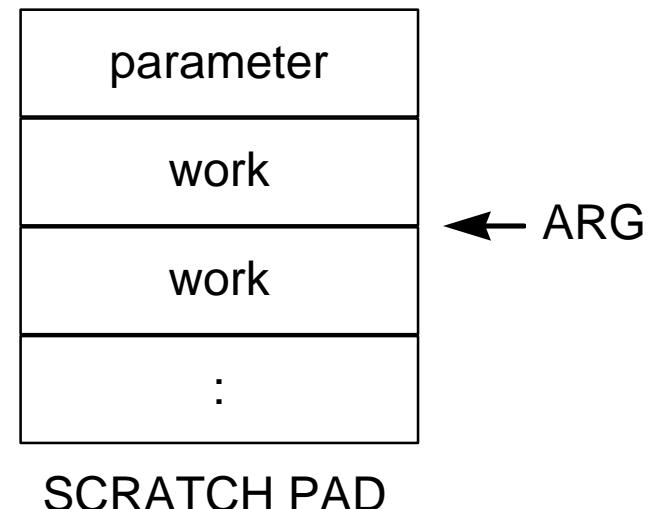

- grouped together and defined as a structure

WORK

- grouped together and defined as a structure

ARGUMENT

- pointer to the scratch pad

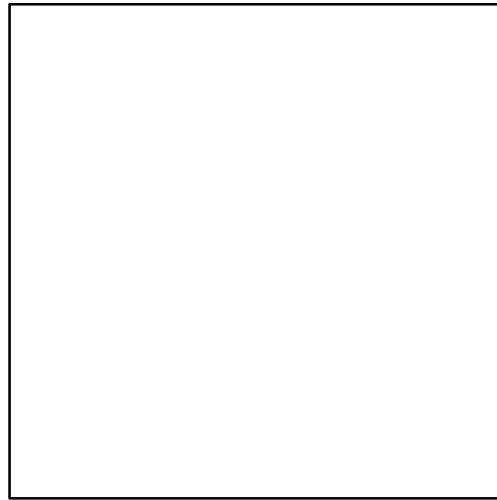

Sony Computer Entertainment Inc.

CONFIDENTI

READ modeling data

(x_0, y_0, z_0)

(x_1, y_1, z_1)

(x_2, y_2, z_2)

(x_3, y_3, z_3)

Reading 4 vertices, 12 words takes
about 70 cycles

If the data can be expressed
as w,h,d, about 7 words and 20
cycles can be saved

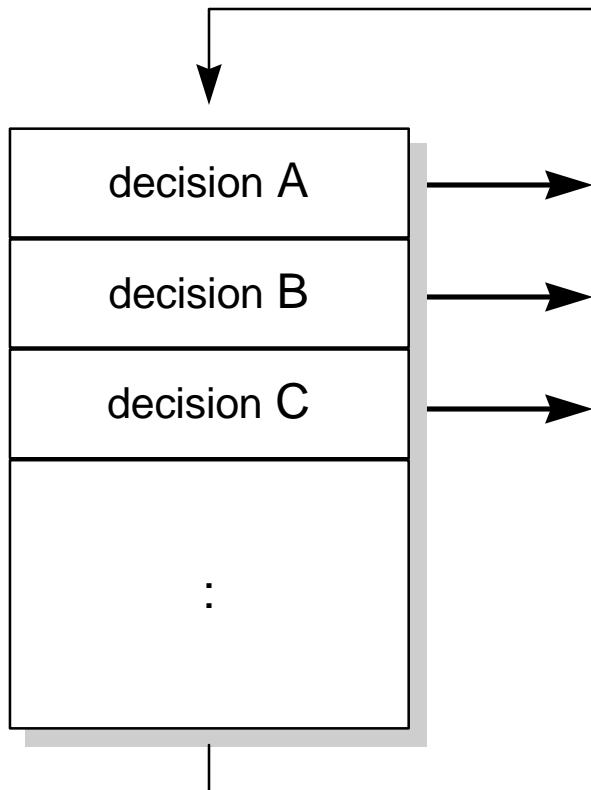

***Modeling data formats should take into
consideration the fact that
memory reads are very slow***

Sony Computer Entertainment Inc.

CONFIDENTI

Polygons that will not be displayed should be rejected early on

the rejection amount is

$A > B > C$

A is the GTE
flag clip

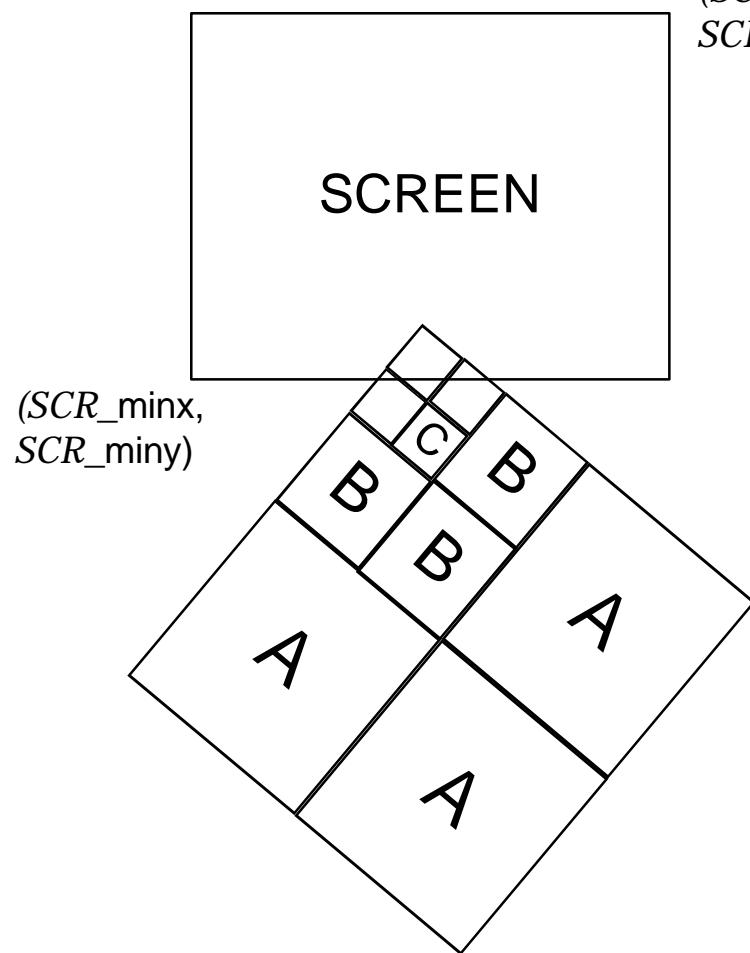

Sony Computer Entertainment Inc.

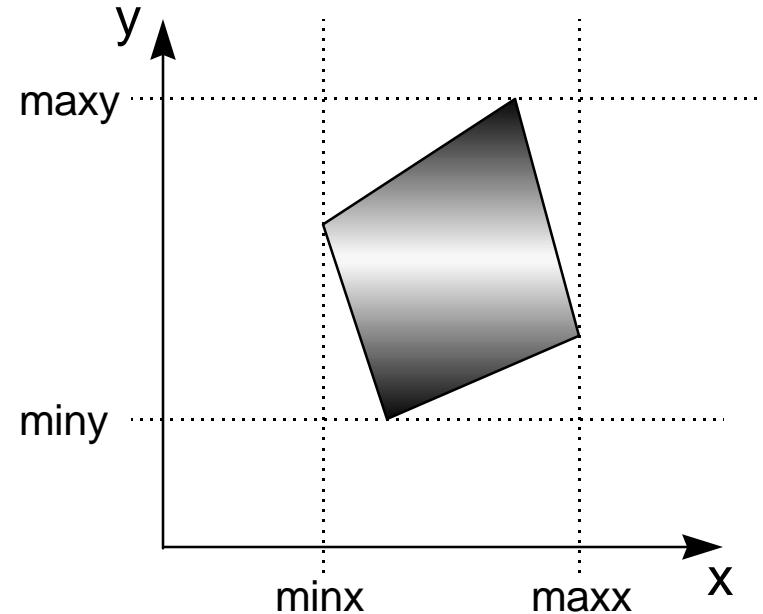

CONFIDENTI

Clipping (1)

HW clip

4-vertex min-max

Clip conditions

$maxx >$	SCR_{minx}
$maxy >$	SCR_{miny}
$minx >$	SCR_{maxx}
$miny >$	SCR_{maxy}

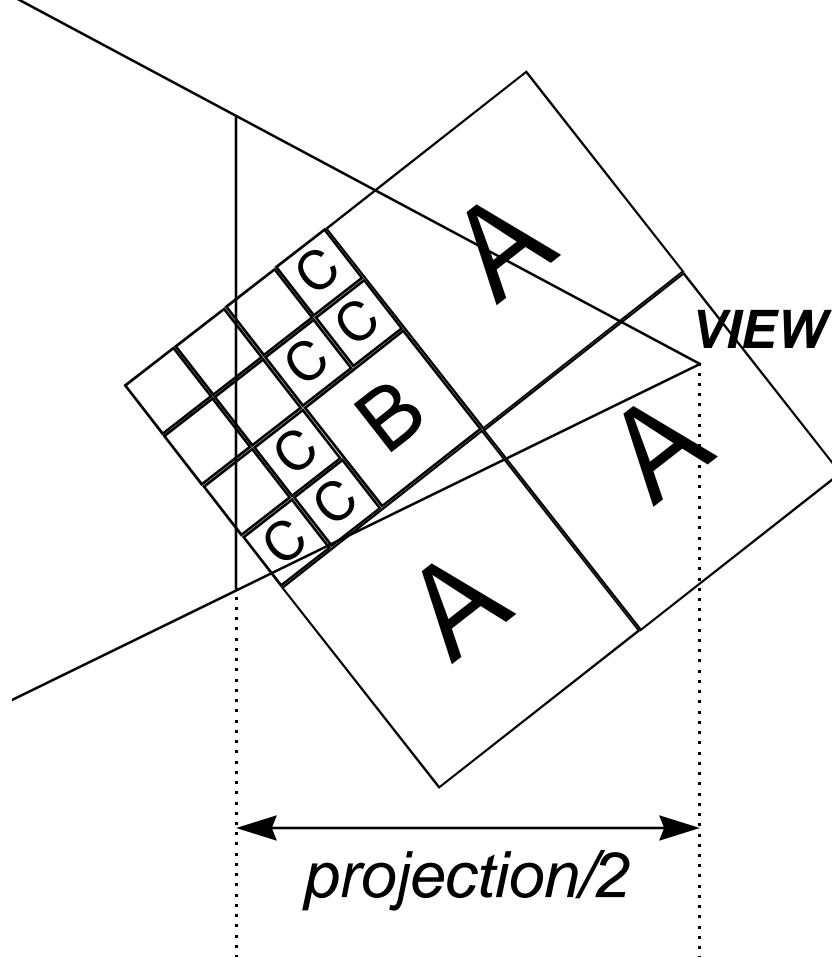

Sony Computer Entertainment Inc.

CONFIDENTIAL

Clipping (2)

NEAR Z clipping

Clip conditions

SZ0 < *projection/2*
&
SZ1 < *projection/2*
&
SZ2 < *projection/2*
&
SZ3 < *projection/2*

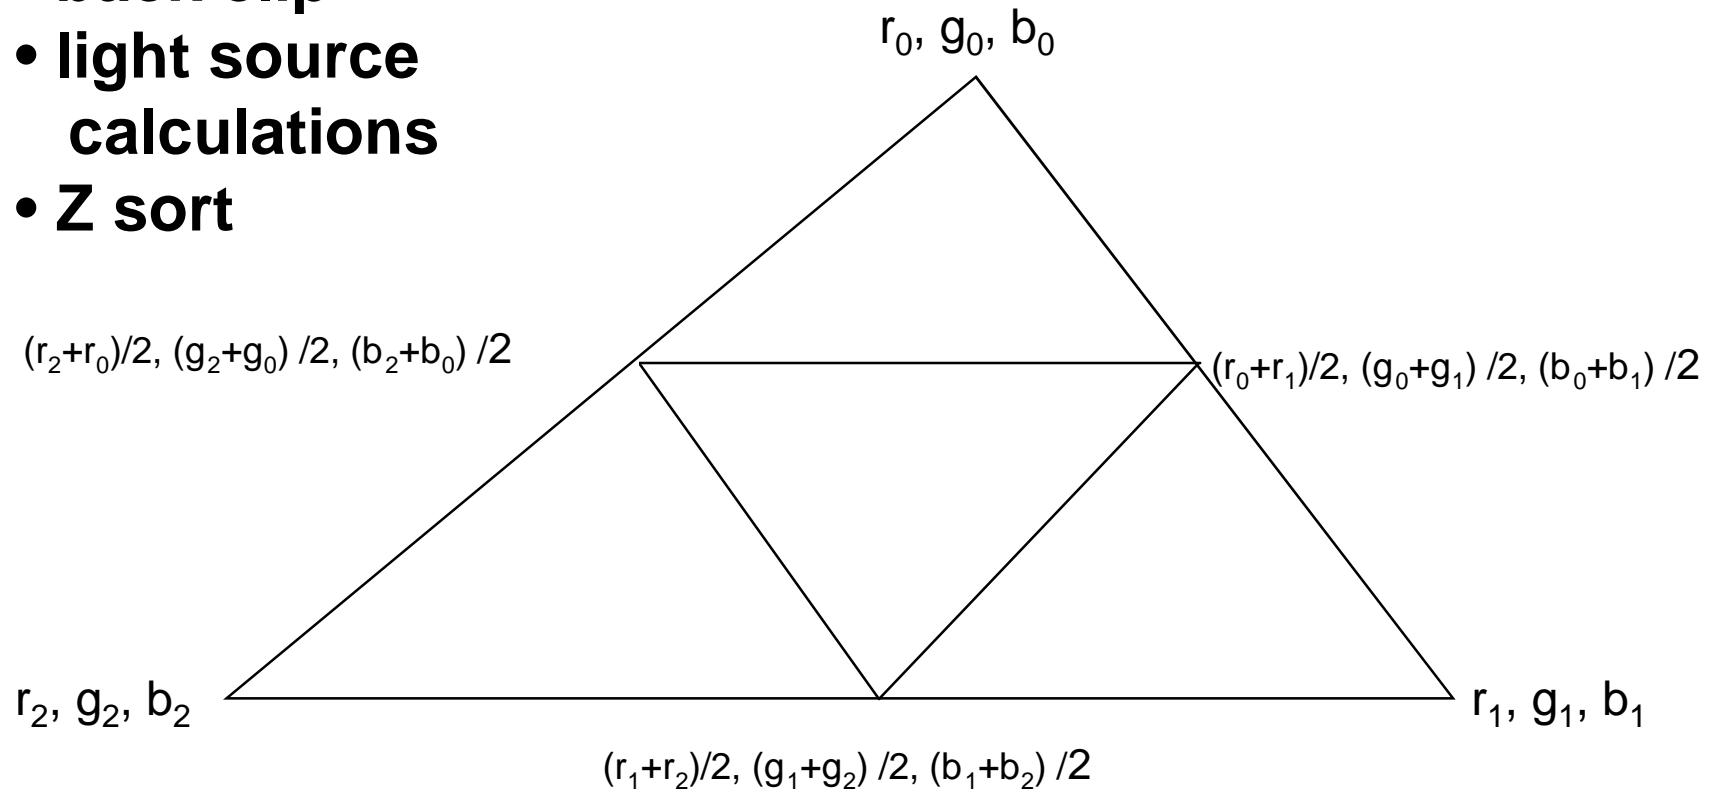

Sony Computer Entertainment Inc.

CONFIDENTI
AL

Split processing for before and after division

Processing that is performed just once before division

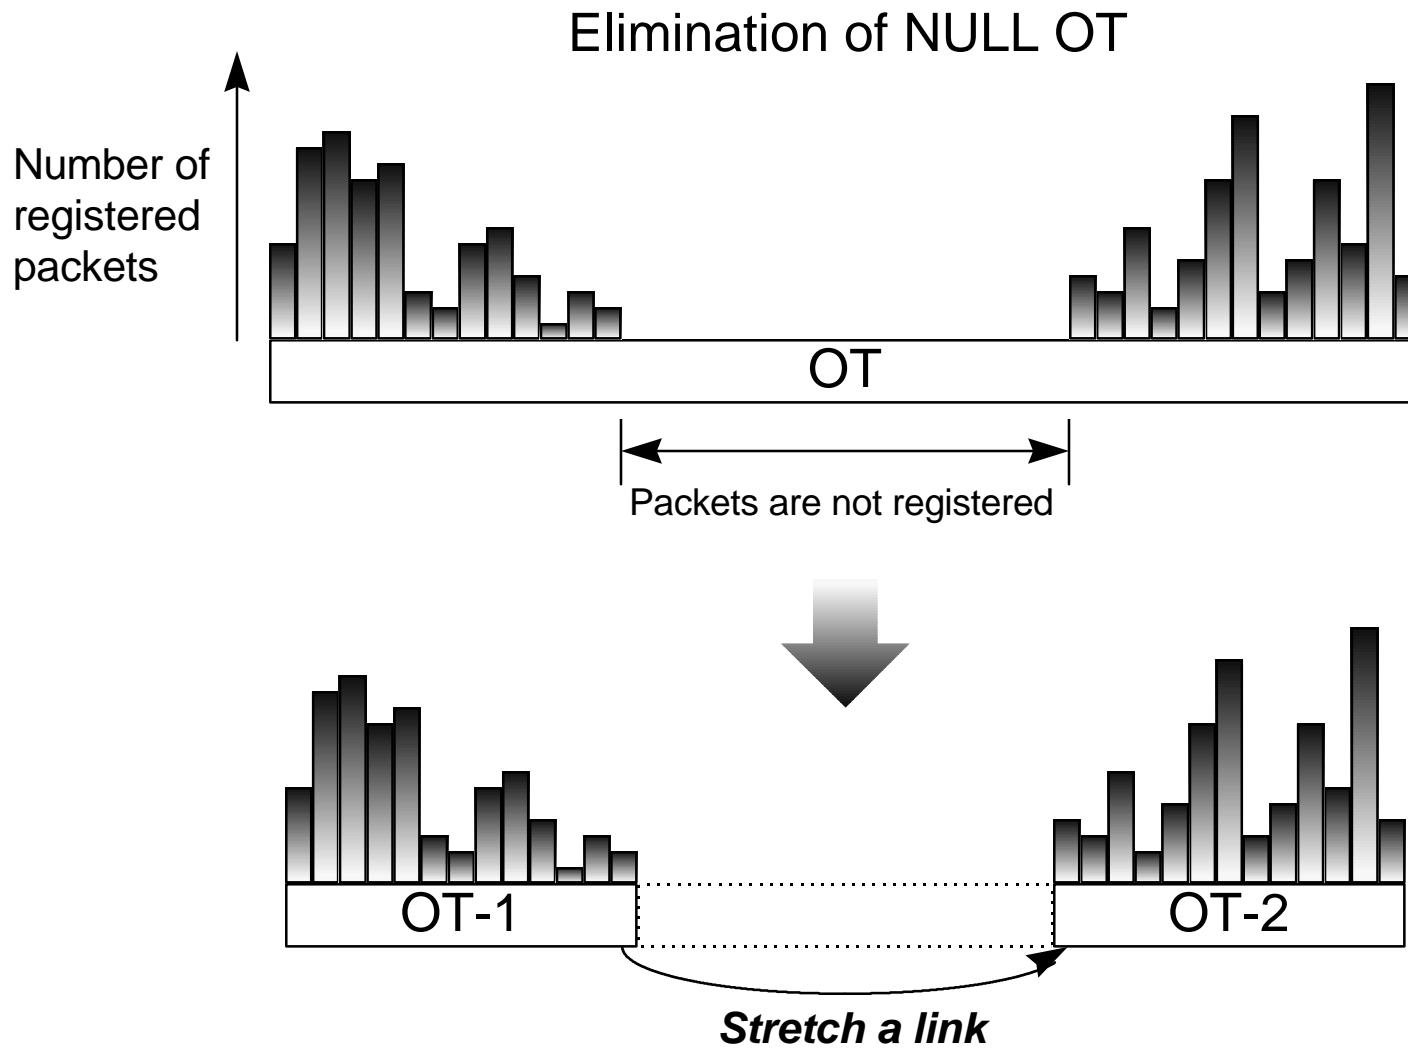

- back clip
- light source calculations
- Z sort

Sony Computer Entertainment Inc.

CONFIDENTI

Eliminating useless OT

Sony Computer Entertainment Inc.

CONFIDENTI

Conclusion

Rendering ground in 3-dimensions

1. Active 3-dimension divisions
2. Recursive call
3. On cache

Sony Computer Entertainment Inc.

CONFIDENTI
